Challenge: Superhero name

In this fun and interactive Python programming challenge, you will create a unique superhero name using the print and input functions. Let your imagination run wild and become the superhero you've always wanted to be!

Challenge:

Your goal is to create a program that generates a personalized superhero name by prompting the user for two pieces of information:

- The first adjective found on the 13th page of the book closest to them.
- Something that scares them (ideally, a noun). 👹
- Using the print and input functions, combine the two inputs into a single superhero name and display it to the user.

Try to complete the challenge on your own, using the outline above as a reference if needed. Unleash your creativity and have fun creating your superhero name! 😁
